Lavanya Kalisetti

Software Engineer | Java Developer

lavanyakalisetti2002@gmail.com | 9381002987 | Hyderabad, Telangana

Linkedin | Portofolio

Professional Summary

Software Engineer with 1 year of professional experience in software development, specializing in Java backend development and enterprise application development. Experienced in designing, developing, and maintaining RESTful APIs and scalable backend applications using Java, Spring Boot, Spring Security, Microservices, JPA/Hibernate, and PostgreSQL. Skilled in implementing JWT-based authentication and authorization, API Gateway integration, input validation, exception handling, and structured logging. Hands-on experience in API testing and documentation using Postman and Swagger/OpenAPI, along with unit testing using JUnit. Currently contributing to e-commerce applications involving vendor and consumer functionalities, with experience in database operations, backend development, and API integration.

Technical Skills

- **Programming Languages :** Java, JavaScript, SQL
- **Backend Development :** Spring, Spring Boot, Spring MVC, Spring Security, Microservices, REST APIs
- **Frontend & Mobile Development :** HTML, CSS, React, React Native
- **Database** : SQL, PostgreSQL, PL/SQL, MongoDB
- **Security & Testing :** JWT Authentication, JUnit, Unit Testing, Integration Testing, API Testing
- **Development Tools :** Postman, Swagger/OpenAPI, Maven, Gradle, Git, GitHub, Jenkins, Jira, SLF4J

Education

Bachelor of Technology ***2020 – 2024***
Jawaharlal Nehru Technological University Chilakapalem , AP
Graduated in Computer Science from Sri Sivani College of Engineering

Professional Experience

Software Engineer | Java Developer *August 2025 – Present*
Dhatvi Business Solutions Pvt. Ltd.

Worked as a Java Backend Developer, building secure, scalable RESTful APIs and microservices using Java, Spring Boot, Spring Security, JWT, and PostgreSQL for e-commerce applications. Collaborated with frontend, QA, and cross-functional teams on testing, code reviews, and performance tuning to deliver stable, production-ready releases.

Projects

1. ZestBot – Vendor Application

Aim: A vendor-side e-commerce platform that lets sellers manage products, inventory, and orders through secure, scalable backend services.

- Designed and developed secure RESTful APIs using Java, Spring Boot, Spring Security, and JWT-based authentication and authorization for vendor operations.
- Architected a microservices-based backend with API Gateway routing and load balancing to improve scalability, maintainability, and service isolation.
- Modeled the PostgreSQL schema and wrote optimized SQL queries (DDL, DML, indexing) to support product, inventory, and order management.

- Applied clean layered architecture with DTOs, Bean Validation, and centralized exception handling for consistent, predictable API responses.
- Implemented structured logging with SLF4J to support monitoring, troubleshooting, and faster issue resolution.
- Wrote unit and integration tests with JUnit to ensure code quality and reduce regressions across releases.
- Documented and validated APIs using Swagger/OpenAPI and Postman, enabling smooth collaboration with frontend and QA teams.
- Participated in code reviews, debugging, and performance tuning to keep the application stable and production ready.

2. ZestBot – Consumer Application

Aim: A consumer-facing e-commerce platform that lets customers browse products, place orders, and track purchases through a fast, reliable mobile experience.

- Developed scalable RESTful APIs using Java, Spring Boot, Spring Security, and JWT to power product browsing, cart, checkout, and order flows.
- Built microservices with API Gateway routing to enable independent deployment, modular development, and reliable service communication.
- Implemented pagination, filtering, and sorting on high-volume product listings to improve response efficiency and user experience.
- Designed PostgreSQL data models and optimized queries to support consistent, high-performance data access.
- Integrated React Native screens with backend REST APIs, handling navigation, loading, error, and empty states for a smooth mobile experience.
- Enforced request validation, centralized exception handling, and SLF4J logging to ensure dependable backend operations.
- Wrote JUnit unit and integration tests, and verified APIs with Postman and Swagger/OpenAPI.
- Collaborated with vendor, chatbot, and frontend modules to deliver end-to-end features and resolve cross-service integration issues.

Certifications

- Full Stack Java from Naresh i Technologies
- Programming in java from NPTEL
- Career Edge on young professional certificate from TCSION

Awards and Recognition

- Best Employee of the Month Award — Dhatvi Business Solutions Pvt. Ltd.
- Performer of the Year Award— recognized at Dhatvi Business Solutions Pvt. Ltd.'s Anniversary Celebrations.
